

**Organization:** OGMA– INDÚSTRIA AERONÁUTICA DE PORTUGAL  
**Sector:** Aeronautics  
**Location:** Lisbon, Portugal  
**Solution:** MPS Hosted Enterprise Edition  
**Number of Users:** 1.400

With more than nine decades of history since its creation on June 29, 1918, OGMA today has a leading role in the global business of aeronautical maintenance and manufacturing business.

Throughout its history, OGMA has accumulated knowledge and experience which are reflected in providing the highest quality products and services to customers around the world.

OGMA is attentive to the evolution of the aeronautical industry and proves to be up to the standards demanded by the various aeronautical authorities, thus obtaining the necessary certifications that allow us to offer a wide range of solutions and, above all, to satisfy the expectations of our customers.

## CHALLENGE

**OGMA** had some problems receiving spam/malware e-mails and, in particular, the scourge of the Locky family virus. As the email service is critical to the daily activity of the company, which is in regular contact with various entities throughout the world, this has aggravated the problem of the volume of malware received.

In terms of email security, there was a need for an email security solution to detect, block, and effectively reduce the problem of spam and the Locky Ransomware.

The **AnubisNetworks'** Labs team was one of the first global entities to detect the activity of the Ransomware Locky (virus distributed via email with infected attachments), which instantly adjusted the email filters of the MPS-Mail Protection Service solution in response to this type of attacks.

**AnubisNetworks'** Global Threat Intelligence Platform continuously monitors all available information about botnets, IP reputation, Phishing messages, and Malware campaigns, which communicates through MPS filters for proactive, real-time malware prevention.

*"The **AnubisNetworks'** solution has allowed us to dramatically reduce this situation, as well as placing itself as the first protection barrier against some of the viruses that circulate via email. We get more security, more effective control and greater transparency in the email messages we receive and we exchange with abroad."*

**Sérgio Almeida**

Director of Information Systems at OGMA

## RESULTS

The deployment of the AnubisNetworks' MPS Hosted Enterprise Edition solution at OGMA was easy to implement and impacted on its business strategy, since the contact and the relationship with its partners (customers or suppliers) is supported by the email service, whether for approval requests to carry out activities on its aircrafts, or to negotiate proposals with clients, or to obtain proposals from suppliers.

The deployment of the email security solution, the MPS, enabled OGMA to provide service availability and some support to partners (customers or suppliers). When OGMA receives emails from outside partners, because they have been blocked, it can give instructions to those entities it works with, identifying the problem and how to correct this anomalous situation. In other words, it is able to support its partners in a way that is clearly outside its scope.

In this way, they have managed to consolidate their image as an organization and the professionalism in the processes. Furthermore, there is a perception of expertise in this topic since they can support the IT areas of their partners in solving problems.

In terms of gains with the installation of the MPS solution, OGMA highlights productivity gains for the simple fact that their employees no longer have to worry about managing the "spam" they receive, which means saving hundreds of euros per month. If we join to this the fact that the risk of Locky-type attacks has diminished, and as a consequence, the loss of information has decreased, we have reached a saving of thousands of euros.

OGMA highlights as key advantages of the deployment of email security, the drastic reduction on the volume of spam received, as well as placing itself as the first protection barrier against some of the viruses circulating via email, particularly the Locky family. By having an effective email security in their infrastructure, they gain effective control and transparency in both inbound and outbound email messages. Another advantage is the support provided by AnubisNetworks' to OGMA, very fast and assertive, as well as the easy management of the MPS platform regarding email management and security.

*"The AnubisNetworks' solution clearly responded to the needs and expectations we had regarding email management and security, enabling productivity gains in all employees' daily activity."*
